Experiment No.: 2

Title

Sketch a Simple Prototype of a Bus Ticket Booking System using Figma Tool

Aim

To design and prototype a simple Bus Ticket Booking System using Figma by creating interactive user interface screens for searching buses, selecting seats, entering passenger details, making payments, and confirming ticket bookings.

Software/Tools Required

- Figma (Web/Desktop)

Procedure

Step 1: Create a New Figma Project

1. Open **Figma** in your web browser or desktop application.
2. Click **New Design File**.
3. Rename the file as **"Bus Ticket Booking Prototype"**.
4. Create a **Desktop Frame (1440 × 900)** from the Frame tool.

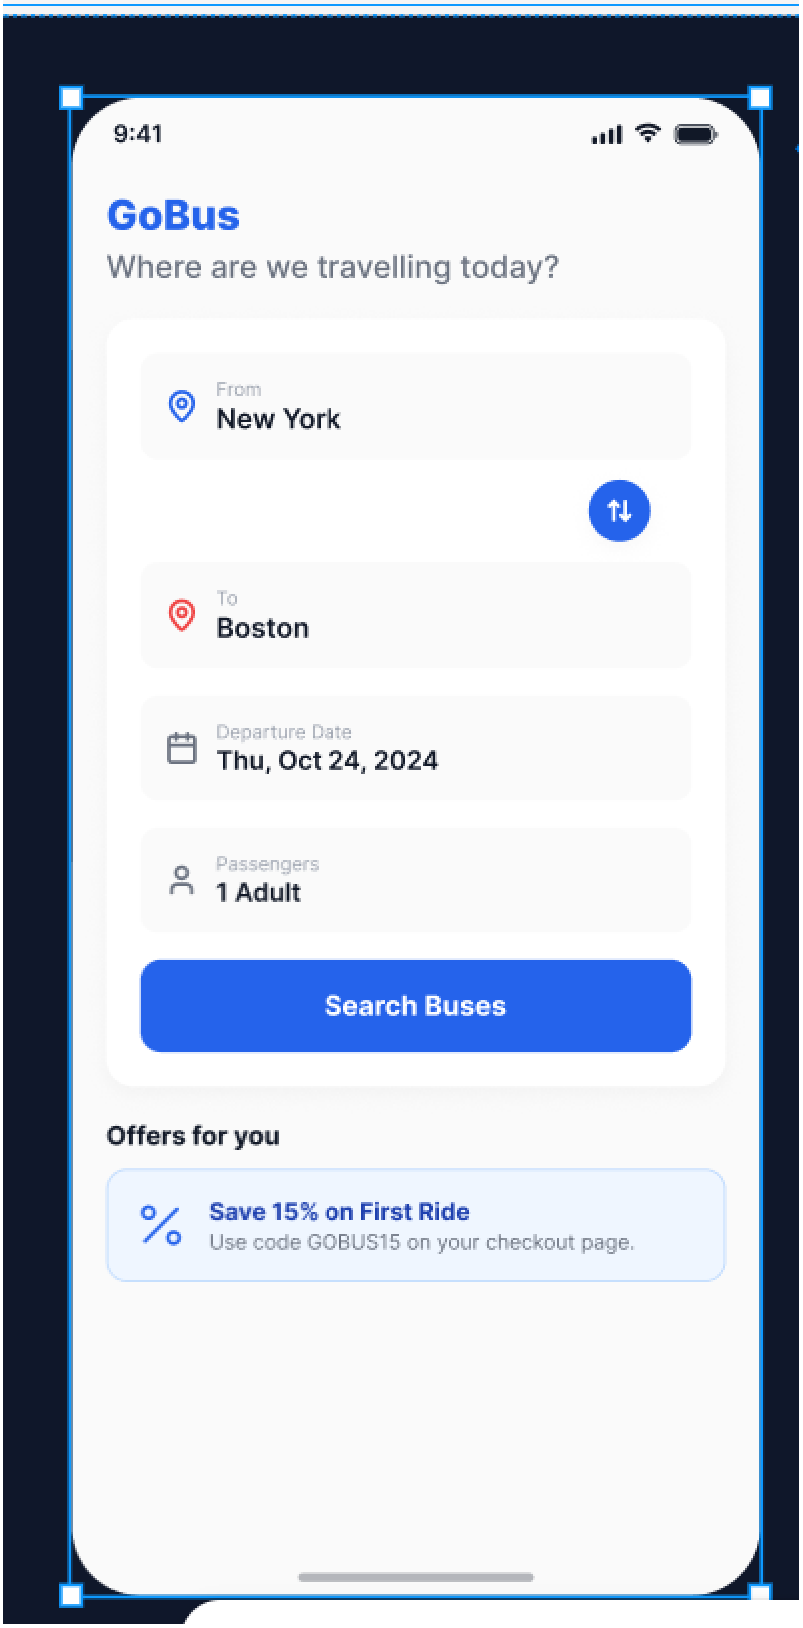
Step 2: Design the Home (Search) Screen

1. Add a dark-colored background for the application.
2. Create a top navigation bar containing:
    - Logo (BusGo)
    - Routes
    - My Trips
    - Support
    - Sign In button
3. Add the heading **"Book your next journey."**
4. Insert a short description below the heading.
5. Create input fields for:
    - From
    - To

- Travel Date
- Number of Passengers

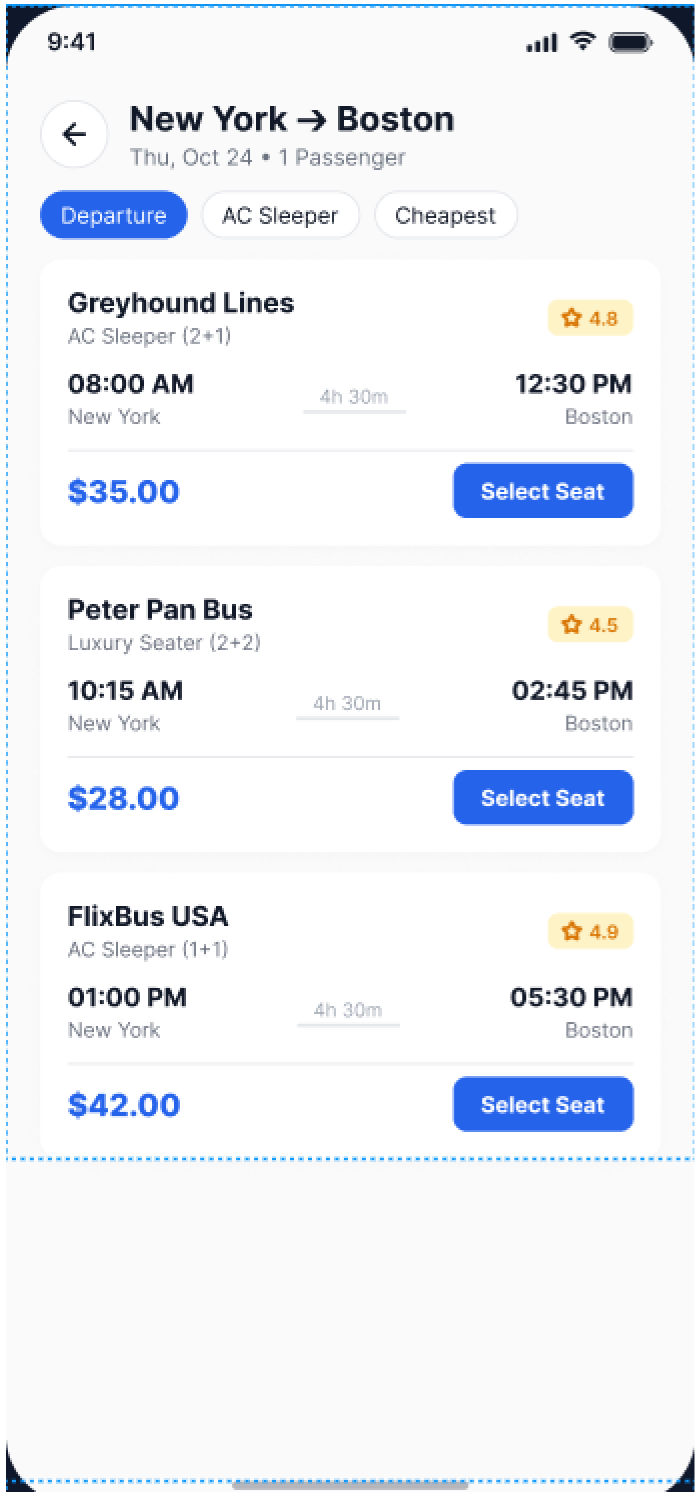
6. Add a **Search Routes** button.
7. On the right side, create a **Live Departures** panel showing:
    - Departure Time
    - Destination
    - Bus Operator
    - Status
    - Ticket Price
8. Add footer statistics such as:
    - Daily Routes
    - Cities
    - On-time Percentage

Step 3: Design the Bus Search Results Screen



1. Duplicate the Home frame.

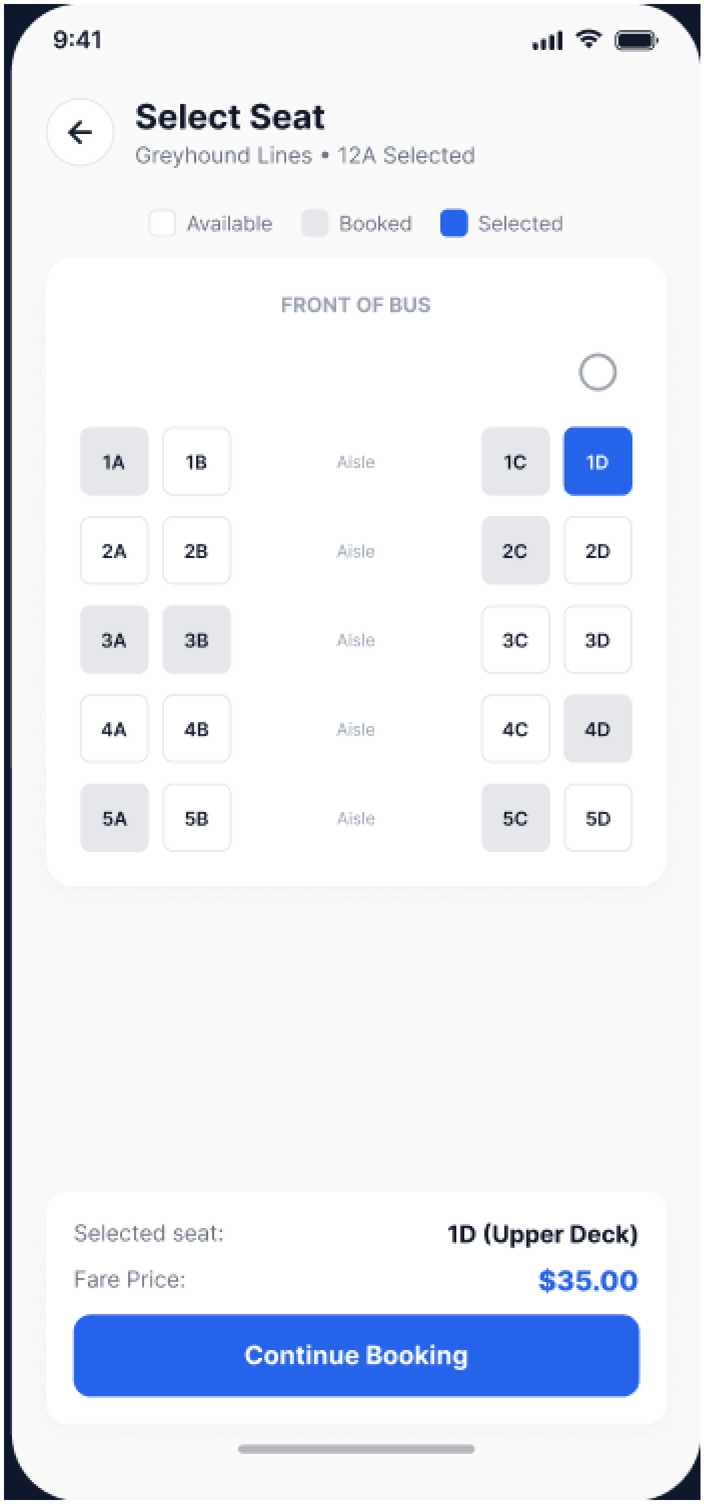
2. Change the page title to **Bus Search Results**.
3. Add a left-side filter panel containing:
    - Bus Type
    - Express
    - Standard
    - Sleeper
    - Sort by Departure
4. Display the available bus list in the center.
5. Each bus card should include:
    - Route ID
    - Departure Time
    - Arrival Time
    - Journey Duration
    - Available Seats
    - Ticket Price
6. Make the bus cards clickable for seat selection.



Step 4: Design the Seat Selection Screen

1. Duplicate the Results frame.

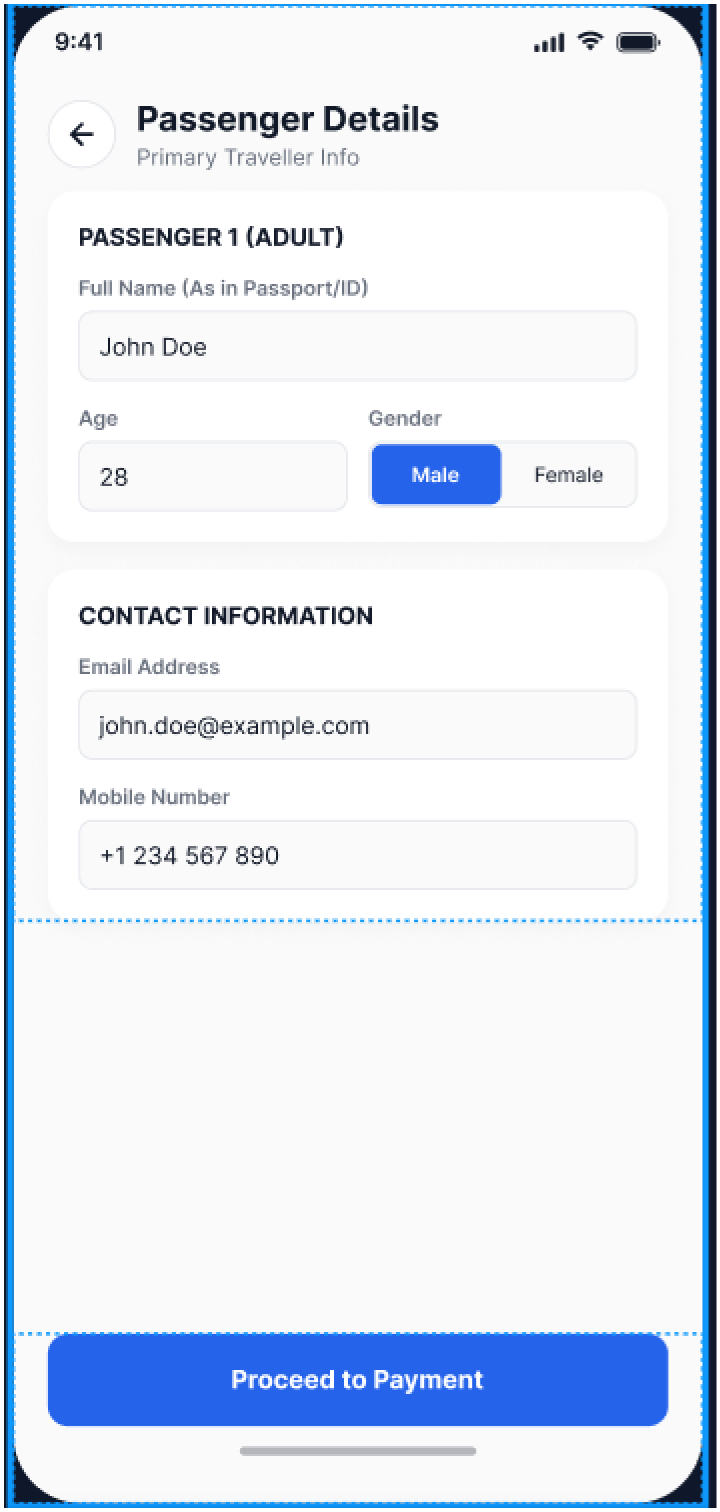
2. Display the selected route information at the top.
3. Add a **Selection Progress** bar.
4. Create a bus layout.
5. Add the **Driver** section at the front.
6. Design seats in a 2 × 2 arrangement.
7. Use different colors to indicate:
    - Available Seats
    - Selected Seats
    - Booked Seats
8. Display the selected seat information on the right panel.
9. Add navigation to proceed to payment.



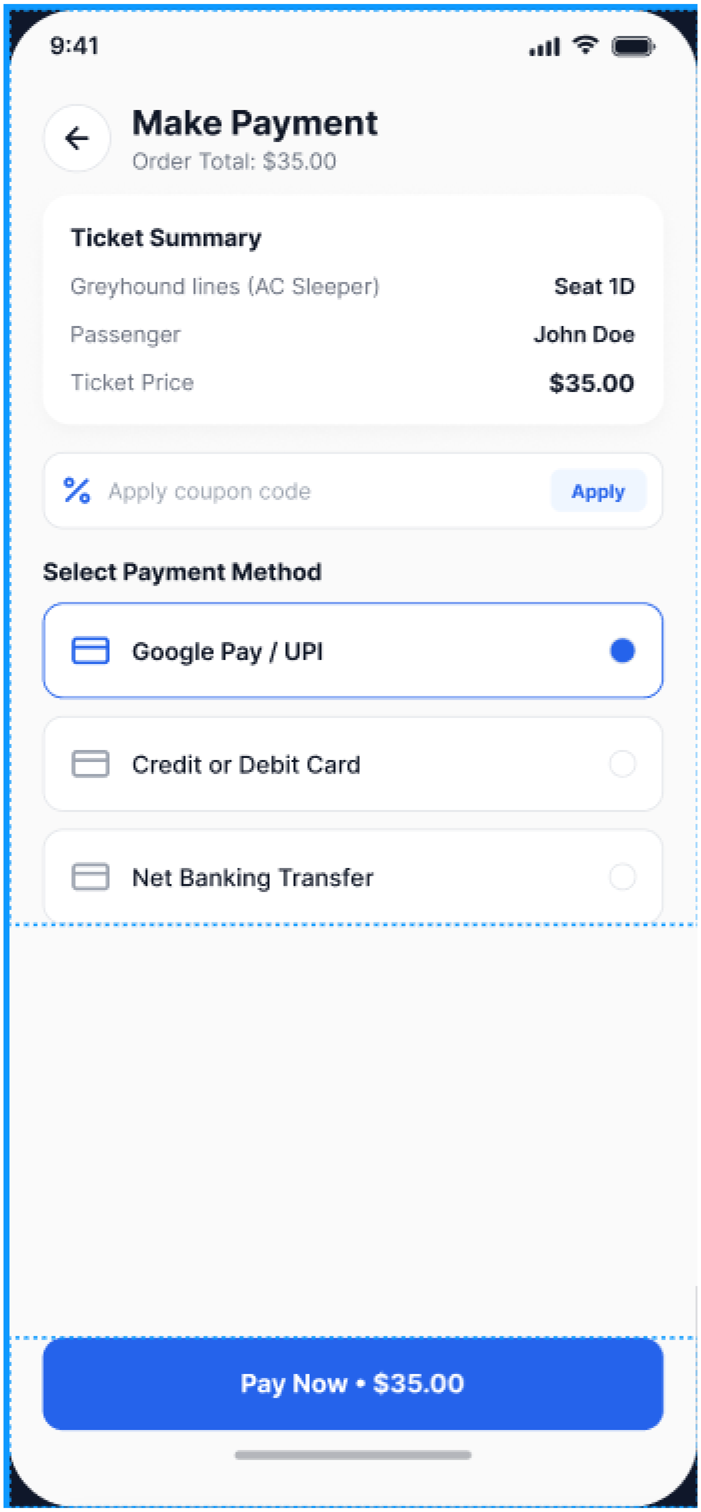
Step 5: Design the Passenger & Payment Screen

1. Duplicate the Seat Selection frame.
2. Add the title **Passenger & Payment**.

3. Create input fields for:
    - Full Name
    - Email
    - Phone Number
4. Create payment fields:
    - Card Number
    - Expiry Date
    - CVV
5. Add an **Order Summary** panel showing:
    - Bus Details
    - Seat Number
    - Fare
    - Service Charge
    - Total Amount
6. Add the **Pay & Confirm Booking** button.



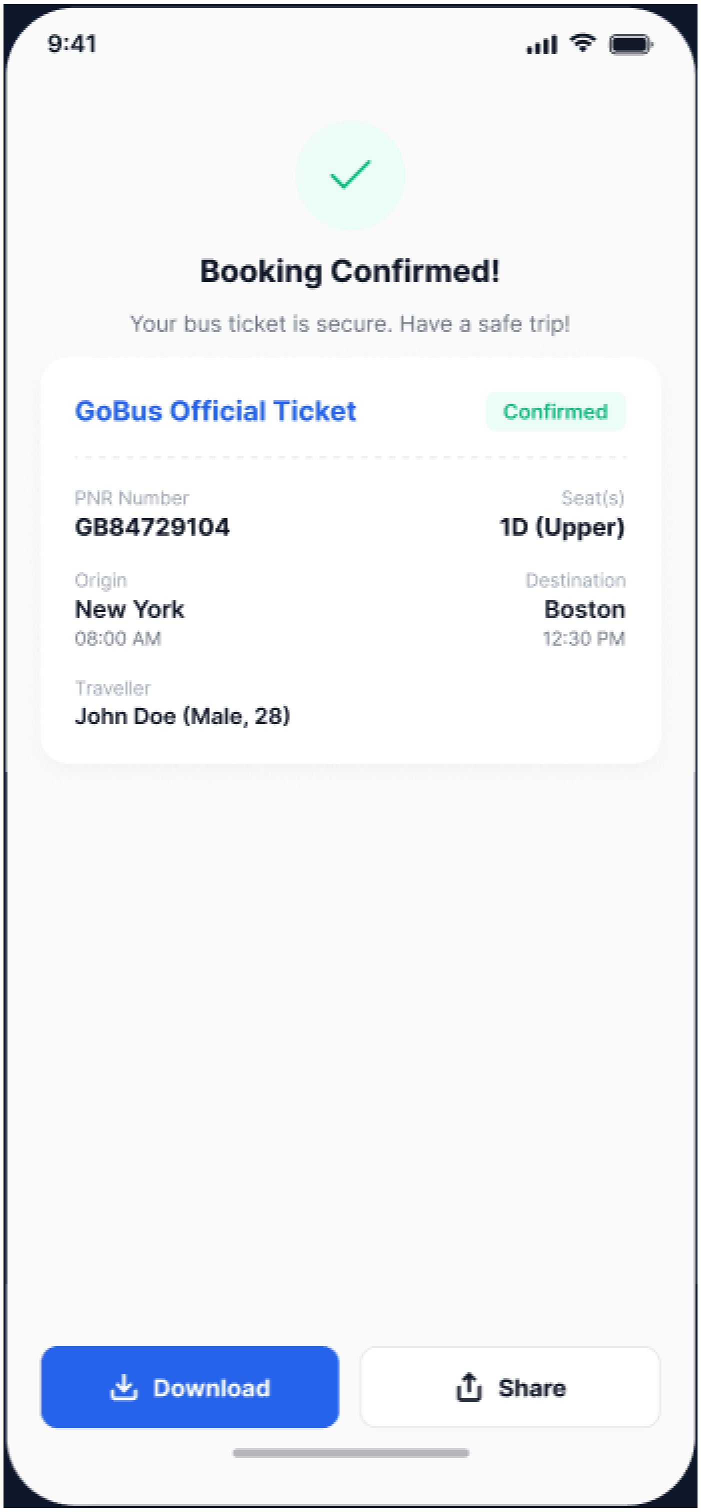
9:41
Passenger Details
Primary Traveller Info
PASSENGER 1 (ADULT)
Full Name (As in Passport/ID)
John Doe
Age
28
Gender
Male
Female
CONTACT INFORMATION
Email Address
john.doe@example.com
Mobile Number
+1 234 567 890
Proceed to Payment



Step 6: Design the Booking Confirmation Screen

1. Duplicate the Payment frame.
2. Replace the form with a success message.

3. Display **Booking Confirmed!**
4. Create a boarding pass containing:
    - Passenger Route
    - Booking Reference Number
    - Departure Time
    - Arrival Time
    - Journey Duration
    - Bus Operator
    - Seat Number
    - Travel Date
5. Add a barcode at the bottom.
6. Create two buttons:
    - Download PDF
    - Book Another



Step 7: Prototype and Preview

Switch to the **Prototype** tab, connect all screens using **On Click → Navigate To** with **Smart Animate (300 ms)** transitions, then click the **Present (▶)** button to preview and test the complete booking flow (Search → Results → Seat Selection → Payment → Confirmation). Finally, save and publish the prototype.

Booking Confirmation

Result

A simple and interactive **Bus Ticket Booking System prototype** was successfully designed using Figma. The prototype demonstrates the complete booking workflow from searching buses to ticket confirmation, providing an intuitive and user-friendly interface for bus ticket reservation.

Experiment No. 3

Title

Create a Prototype of an E-Commerce Mobile App using Figma to Gather Stakeholder Feedback and Approval

Aim

To design and prototype an interactive **E-Commerce mobile application** using Figma that demonstrates the shopping workflow, enabling stakeholders to review the user interface, provide feedback, and approve the design before development.

Procedure

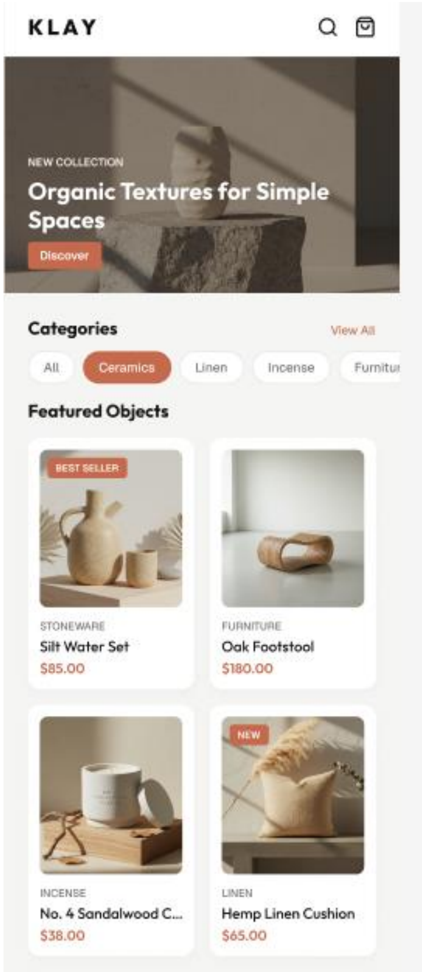
Step 1: Create a New Figma Project

1. Open **Figma** and click **New Design File**.

2. Rename the project as **E-Commerce App Prototype**.
3. Create a **Mobile Frame (iPhone 15/390 × 844)**.

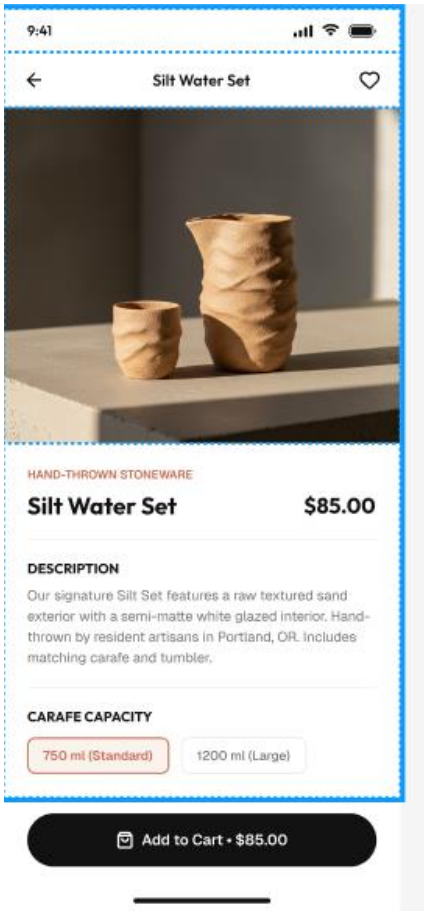
Step 2: Design the Home Screen

1. Add a dark theme background.
2. Insert the application title and search/cart icons.
3. Create a promotional banner with an offer.
4. Add category tabs such as All, Tops, Bottoms, Outerwear, Shoes.
5. Design product cards showing:
    - Product image
    - Product name
    - Price
    - Rating
    - Wishlist icon
6. Add a bottom navigation bar with Home, Search, Saved, Cart, and Profile.



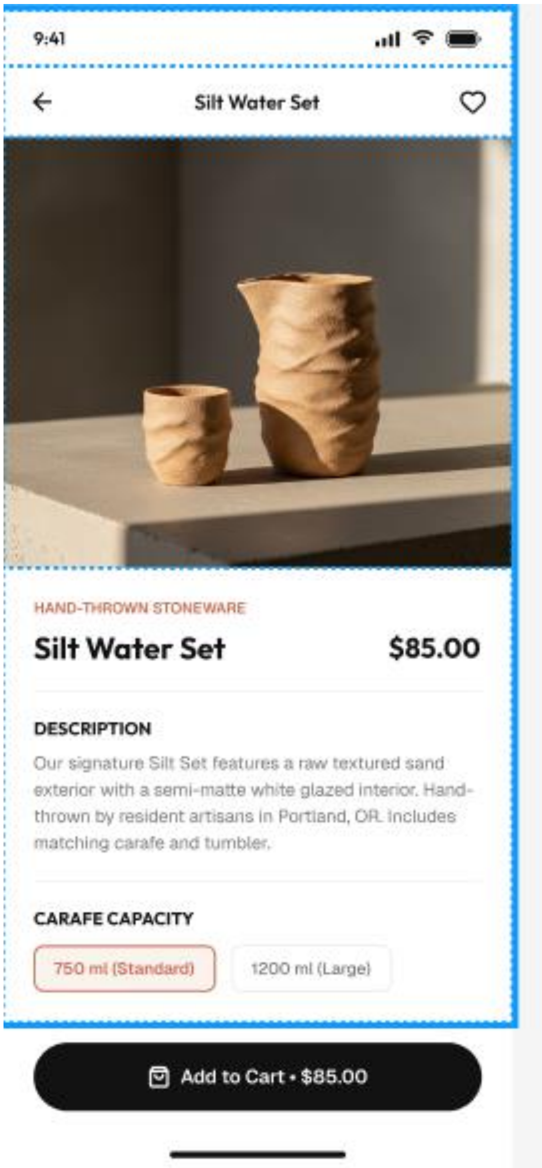
Step 3: Design the Product Details Screen

1. Duplicate the Home screen.
2. Display a large product image.
3. Add the product name, price, and rating.
4. Include color and size selection options.
5. Add the product description.
6. Place an **Add to Cart** button at the bottom.



Step 4: Design the Shopping Cart Screen

1. Duplicate the Product Details screen.
2. Display the selected product with quantity controls.
3. Add a promo code input field.
4. Show subtotal, shipping cost, and total amount.
5. Add a **Checkout** button.

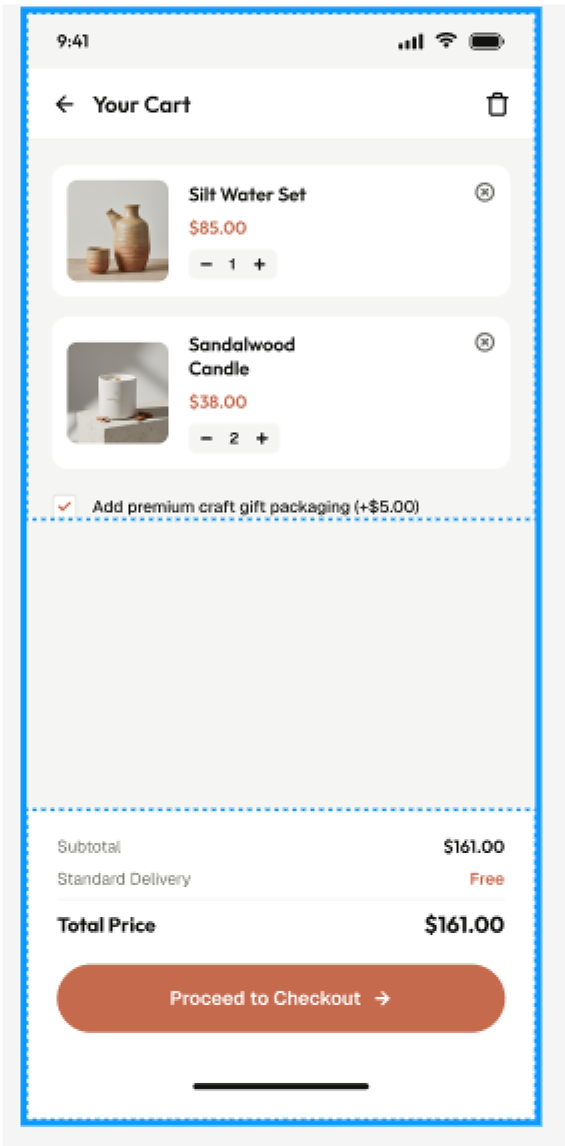


Step 5: Design the Shipping Address Screen

1. Duplicate the Cart screen.
2. Add a checkout progress indicator.
3. Create input fields for:
   - Full Name
   - Address Line 1
   - Address Line 2
   - City

- Postal Code
- Country

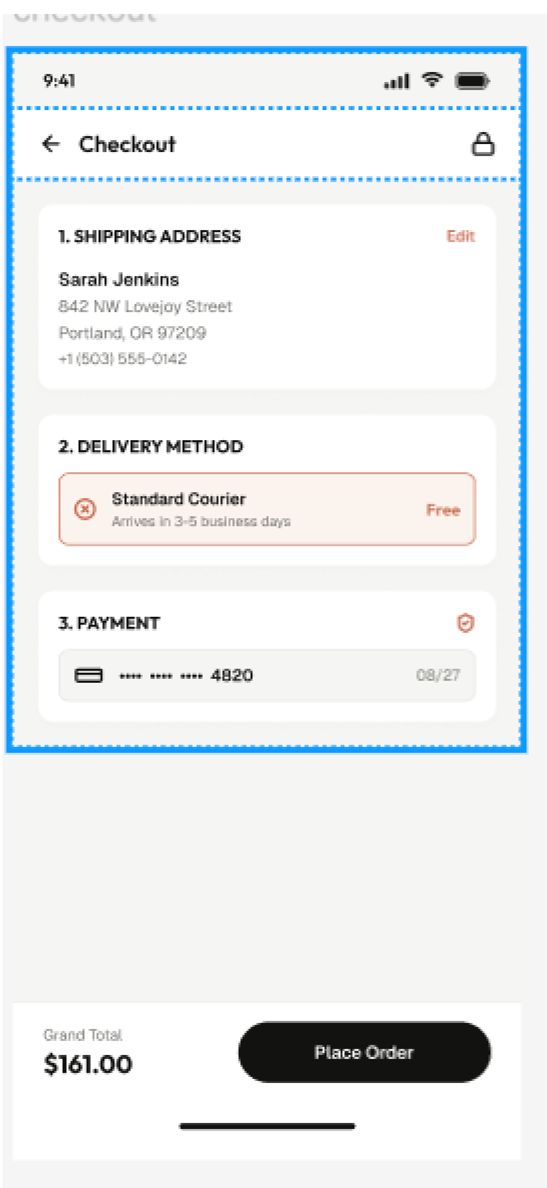
4. Add a **Continue to Payment** button.



Step 6: Design the Payment Screen

1. Duplicate the Shipping screen.
2. Display the checkout progress.
3. Add payment card selection.

4. Create fields for:
    - Card Number
    - Cardholder Name
    - Expiry Date
    - CVV
5. Display the order summary.
6. Add the **Place Order** button.



Step 7: Design the Order Confirmation Screen

1. Duplicate the Payment screen.
2. Display a success icon with the message **Order Placed**.
3. Show the order number and estimated delivery date.
4. Add an order tracking status.
5. Include **Continue Shopping** and **Track My Order** buttons.
